(Projection lens is optional.)

Give complete "Chassis No." for parts order or servicing, it is shown on the rating sheet on the cabinet on the projector.

#### FOREWORD

For your convenience, all service parts, identified in this manual are available through Eiki's normal distribution channels.

In addition to service part number, the generic descriptions have been given, where possible, to allow your service technicians to substitute equivalent components which might be available from other sources.

All orders for service parts will be honored. However, in instances where generic components are considered to be available from several common sources, as would be the case with an industry standard fuse, resistor, or semiconductor, it may be more economical and expeditious to purchase the part locally.

### SAFETY PRECAUTIONS

#### WARNING:

The chassis of this projector is isolated (COLD) from AC line by using the converter transformer. Primary side of the converter and lamp power supply unit circuit is connected to the AC line and it is hot, which hot circuit is identified with the line (  ) in the schematic diagram. For continued product safety and protection of personnel injury, servicing should be made with qualified personnel.

The following precautions must be observed.

- |  |   |
|--|---|
| 1: An isolation transformer should be connected in the power line between the projector and the AC line before any service is performed on the projector.                                  | DO NOT OPERATE THIS PROJECTOR WITHOUT THE PROTECTIVE SHIELD IN POSITION AND PROPERLY SECURED.   |
| 2: Comply with all caution and safety-related notes provided on the cabinet back, cabinet bottom, inside the cabinet or on the chassis.  | 4: Before replacing the cabinet cover, thoroughly inspect the inside of the cabinet to see that no stray parts or tools have been left inside.        |
| 3: When replacing a chassis in the cabinet, always be certain that all the protective devices are installed properly, such as, control knobs, adjustment covers or shields, barriers, etc. | Before returning any projector to the customer, the service personnel must be sure it is completely safe to operate without danger of electric shock. |

### PRODUCT SAFETY NOTICE

Product safety should be considered when a component replacement is made in any area of the projector. Components indicated by mark  in the parts list and the schematic diagram designate components in which safety can be of special significance. It is, therefore, particularly recommended that the replacement of there parts must be made by exactly the same parts.

### SERVICE PERSONNEL WARNING

Eye damage may result from directly viewing the light produced by the Lamp used in this equipment. Always turn off Lamp before opening cover. The Ultraviolet radiation eye protection required during this servicing. Never turn the power on without the lamp to avoid electric-shock or damage of the devices since the stabilizer generates high voltages(approx.8kV) at its starts. Since the lamp is very high temperature during units operation replacement of the lamp should be done at least 45 minutes after the power has been turned off, to allow the lamp cool-off.

#### CAUTION

Not for use in a computer room as defined in the Standard for the Protection of Electronic Computer/Data Processing Equipment, ANSI/NFPA 75.

Ne puet être utilisé dans une salle d'ordinateurs telle que définie dans la norme ANSI/NFPA 75 Standard for Protection of Electronic Computer/Data Processing Equipment

#### CAUTION

RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE.  
DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTIONS.

## ■ Circuit Protections

This projector provides the following circuit protections to operate in safety. If the abnormality occurs inside the projector, it will automatically turn off by operating one of the following protection circuits.

### ● Fuse

A fuse(**F901**) is located inside of the projector. When the POWER indicator is not lighting, the fuse may be opened. Check the fuse as following steps.

The fuse should be used with the following type;

#### PLC-XT4U

**Fuse Part No.: 423 033 1804**  
**TYPE 30.0A250V FUSE**  
**SOC CORP. KST2 30A**

#### PLC-XT4E

**Fuse Part No.: 423 028 4209**  
**TYPE 15.0A400V FUSE**  
**SOC CORP. SHV14 15A N4**

#### How to replace the fuse

1. Remove the cabinet top following to "Mechanical Disassemblies".
2. Remove the cover and the fuse from fuse holder.

To install the fuse, take reversed step in the above.

### ● AC Current Sensor

**AC current sensor is used only for LC-XT4E.**

The AC Current Sensor is provided to prevent damage to the power supply circuits.

When AC input voltage is under 108V at MAINS SW ON, the AC Current Sensor will be operated and the CPU does not turn the projector on, and both of READY and WARNING TEMP. indicators start flashing.

Check that the AC current sensor signal is correct. L : Abnormality

### When both of the WARNING TEMP. and READY Indicators are flashing:

When the projector detects an internal problem, it will shut down automatically and both of the WARNING TEMP. and READY Indicators starts flashing. In this condition, the projector cannot be turned on even if you press the POWER ON-OFF button on the remote control unit or on the side control. If this case happened, disconnect and reconnect the AC power cord, and then turn on the projector again to check its operation. If the projector shuts down again or fails to be turned on, the internal check and repair will be required.

Check items listed below;

- **Power Failure Protection**
- **AC Current Sensor** (See the previous page.)
- **Temperature Check of Lamps**
- **Lamp Cover Switch**

#### FRONT INDICATORS

#### REAR INDICATORS

### ● Power Failure Protection

Power failure protection diodes detect abnormal voltage on the power supply circuits or the fan operation stop.

### ● Temperature Check of Lamps

Temperature switches (SW 903~906) are arranged near the four lamps. Temperature switches will operate, if temperature reaches 110 degrees.

Temperature switches

--- open at 110 degrees.

SW903 ---Lamp1

SW904 ---Lamp2

SW905 ---Lamp3

SW906 ---Lamp4

When temperature switches become open, they cut off 12V\_PFC line to PFC(power factor control) unit, and then a projector will be shut down.

Temperature switch

Temperature switch  
**SW905** (For Lamp3)

Temperature switch  
**SW904** (For Lamp2)

Temperature switch  
**SW903** (For Lamp1)

### ● Lamp cover switch

When the lamp cover is removed or not closed completely, the lamp cover switch (SW902) cuts off 12V\_PFC line to the PFC unit, and then a projector will be shut down.

After opening the lamp cover for replacing the lamp unit, place the lamp cover correctly, otherwise the projector can not be turned on.

### When the WARNING TEMP. Indicator is flashing:

The WARNING TEMP. Indicator flashes red to let you know the internal temperature of the projector exceeds the normal level. If the temperature goes up further, the projector will be turned off automatically and the Ready indicator will go out. (The WARNING TEMP. Indicator continues flashing.) After the cooling-off period, the READY Indicator lights on again and the projector can be turned on by pressing the POWER ON-OFF button on the remote control unit or on the side control. When you turn on the projector, the WARNING TEMP. Indicator will go out.

If the WARNING TEMP. Indicator is still flashing, check items listed below;

- **Installation**
- **Air Filter**
- **Temperature Monitor System**

#### FRONT INDICATORS

#### REAR INDICATORS

### ● Installation

- Air filter is clogged with dust particles. Remove dust from the air filter by following instruction in the "Air filter care and cleaning".
- Ventilation slots of the projector are blocked. In such case, reposition the projector so that ventilation slots are not obstructed.
- Check if projector is used at higher temperature place (Normal operate is 5 to 35°C or 41 to 95°F)

#### HOT AIR EXHAUSTED !

**Air blown from exhaust vent is hot. When using or installing a projector, following precautions should be taken.**

- Do not put flammable objects near these vents.
- Keep rear grills at least 3' (1m) away from any object, especially heat-sensitive object.
- Do not touch this area, especially screws and metallic parts. This area will become hot while a projector is used.

### ● Air Filter

#### AIR INTAKE VENTS

This projector is equipped with cooling fans for protection from overheating. Pay attention to following to ensure proper ventilation and avoid a possible risk of fire and malfunction.

- Do not cover vent slots.
- Keep bottom clear any objects. Obstructions may block cooling air.

## ● Temperature Monitor System

### ■ To control the driving power of the cooling fans.

This projector detects internal temperature and automatically controls operating power of cooling fans.

The CPU checks the temperature and atmospheric pressure inside a projector. It checks a temperature using temperature sensor-IC5801 and it checks an atmospheric pressure using pressure sensor-IC886.

The CPU controls the driving power of the cooling fans so the temperature inside the projector is maintained to normal temperature.

### ■ To shut down the projector.

The CPU checks temperature of Blue polarized glass (PTH901) and inhalation air(IC5801). If each part temperature reaches to abnormal temperature, the CPU will turn off a projector, and will blink WARNING TEMP. indicator at intervals of 0.5 seconds. Cooling fans operate until temperature returns to normal. WARNING TEMP. indicator will stop blink, if temperature returns to normal.

## ■ Lamp Replacement

### LAMP MANAGEMENT (before replacement)

This Projector is equipped with 4 Projection Lamps to ensure brighter image and those lamps are controlled by Lamp Management Function. Lamp Management Function detects status of all lamps and shows status on screen or on LAMP REPLACE indicator. This function also automatically controls Lamp Mode when any of lamps is out for end of life or malfunctions.

#### Lamp Replace Indicator

This LAMP REPLACE indicator lights yellow when any of Projection Lamps is nearing its end, and flashes when any of them becomes out. Check number of lamp on Lamp Status Display and replace lamp.

#### Lamp Status Display

Lamp Status Display appears on screen when power switch is on or changed input position (input 1, input 2, Input 3 or input 4). This shows status of each lamp as; ON, OFF, NEAR END, or OUT. Refer to following for each status.

LAMP STATUS DISPLAY

**Yellow Lamp** ----- Projection Lamp lights normally.

**Dim Lamp** ----- Projection Lamp is turned off.

**Red Lamp** ----- Projection Lamp is nearing its end. When image becomes darker or color becomes unnatural, replace lamp. (LAMP REPLACE indicator lights yellow.)

**X Mark on Lamp** ----- (LAMP REPLACE indicator flashes yellow.)  
Projection lamp is defective or fails to be turned on. Restart a projector on, and make sure lamp is on. If this mark still appears, replace lamp corresponding with number marked X.

#### Lamp Mode Changeover

Lamp Management Function automatically changes combination of lighting lamp (Lamp Mode) by detecting status of lamp. When any of 4 lamps becomes out, Lamp Mode is changed over from 4 lamps to 2 lamps. And when any of 2 lamps are out, a projector operates with 1 lamp. But, in case of combination that the Lamp of 1-4, or 2-3 does not light up, it becomes a 2 lamps mode.

Lamp Mode can be switched to 4 lamps or 2 lamps manually. Refer to SETTING section of Owner's manual.

## LAMP REPLACEMENT

When the life of the projection lamp of this projector draws to an end, the LAMP REPLACE indicator lights yellow. If this indicator lights yellow, replace the lamp with a new one promptly.

The time when the LAMP REPLACE indicator lights is depending on the lamp mode.

### WARNING :

TURN OFF THE UV LAMP BEFORE OPENING THE LAMP COVER. USE UV RADIATION EYE AND SKIN PROTECTION DURING SERVICING.

### FRONT INDICATORS

### REAR INDICATORS

### Follow these steps to replace lamp assembly.

- 1 Check number of lamp to be replaced on Lamp Status Display.

- 6 Replace Lamp Cover and tighten two screws.
- 7 Connect AC Power Cord to a projector and turn a projector on.
- 8 Reset Lamp Replacement Counter. (Refer to section "Lamp Replace Counter".)

**NOTE :** Do not reset LAMP REPLACEMENT COUNTER when lamp is not replaced.

Make sure which number of lamp needs to be replaced on Lamp Status Display. Figure shows case of replacing LAMP 2.

**CAUTION :** Do not operate a Projector while any of lamps removed.  
It may result in malfunctions, fire hazard, or other accidents.

**CAUTION :** High pressure lamp may explode if improperly handled.

Refer to lamp replacement instructions.

### NOTES ON LAMP REPLACEMENT

To maintain quality of picture (better balance of color and brightness in entire screen), we recommend replacing all 4 lamps at a time.

**CAUTION**

For continued safety, replace with a lamp assembly of same type. Allow a projector to cool for at least 45 minutes before you open Lamp Cover. Inside of a projector can become very hot.

**CAUTION**

Do not drop a lamp assembly or touch a glass bulb! Glass can shatter and may cause injury.

**CAUTION**  
**HIGH VOLTAGE**  
**HOT**

## LAMP REPLACE COUNTER

Be sure to reset Lamp Counter when Lamp Assembly is replaced. When Lamp Replace Counter is reset, LAMP REPLACE indicator stops lighting.

(Service Parts No. 610 327 4928)

## LAMP HANDLING PRECAUTIONS

This projector uses a high-pressure lamp which must be handled carefully and properly. Improper handling may result in accidents, injury, or create a fire hazard.

- Lamp lifetime may differ from lamp to lamp and according to the environment of use. There is no guarantee of the same lifetime for each lamp. Some lamps may fail or terminate their lifetime in a shorter period of time than other similar lamps.
- If the projector indicates that the lamp should be replaced, i.e., if the LAMP REPLACE INDICATOR lights up, replace the lamp with a new one IMMEDIATELY after the projector has cooled down.  
( Follow carefully the instructions in the LAMP REPLACEMENT section of owner's manual. ) Continuous use of the lamp with the LAMP REPLACE INDICATOR lighted may increase the risk of lamp explosion.
- A Lamp may explode as a result of vibration, shock or degradation as a result of hours of use as its lifetime draws to an end. Risk of explosion may differ according to the environment or conditions in which the projector and lamp are being used.

### IF A LAMP EXPLODES, THE FOLLOWING SAFETY PRECAUTIONS SHOULD BE TAKEN.

If a lamp explodes, disconnect the projector's AC plug from the AC outlet immediately. Contact an authorized service station for a checkup of the unit and replacement of the lamp. Additionally, check carefully to ensure that there are no broken shards or pieces of glass around the projector or coming out from the cooling air circulation holes. Any broken shards found should be cleaned up carefully. No one should check the inside of the projector except those who are authorized trained technicians and who are familiar with projector service. Inappropriate attempts to service the unit by anyone, especially those who are not appropriately trained to do so, may result in an accident or injury caused by pieces of broken glass.

## ● How to check Lamp Used Time

The LAMP REPLACE indicator will light yellow when the total lamp used time (corresponding value) reaches 2,500 hours - (\*). This is to indicate that lamp replacement is required.

The total lamp used time is calculated by using the below expression;

$$\text{Total lamp used time} = T_{eco} + T_{normal} \times 1.25 - (*)$$

$T_{eco}$  : used time in the Eco mode

$T_{normal}$  : used time in the Normal and Auto mode

You can check the lamp replacement counter following to below procedure.

- 1 Press and hold **POWER ON-OFF** button on the side control of the projector or the remote control unit for more than 20 seconds.
- 2 The projector used time and lamp used time will be displayed on the screen briefly.

Projector used time

## ■ Maintenance and Cleaning

---

After long periods of use, dust and other particles will accumulate on the LCD panel, prism, mirror, polarized glass, lens, etc., causing the picture to darken or color to blur. If this occurs, clean the inside of optical unit. Remove dust and other particles using air spray. If dirt cannot be removed by air spray, disassemble and clean the optical unit.

### ● Cleaning with air spray

1. Remove the cabinet top following to "Mechanical Disassemblies".
2. Clean up the LCD panel and polarized glass by using the air spray from the cabinet top opening.

### Caution:

Use a commercial (inert gas) air spray designed for cleaning camera and computer equipment. Use a resin-based nozzle only. Be very careful not to damage optical parts with the nozzle tip. Never use any kind of cleanser on the unit. Also, never use abrasive materials on the unit as this may cause irreparable damage.

### ● Disassembly Cleaning

Disassembly cleaning method should only be performed when the unit is considerable dirty and cannot be sufficiently cleaned by air spraying alone.

**Be sure to readjust the optical system after performing disassembly cleaning.**

1. Remove the cabinet top and main units following to "Mechanical Disassemblies".
2. Remove the optical base top following to "Optical Unit Disassemblies". If the LCD panel needs cleaning, remove the LCD panel unit following to "LCD panel/Prism ass'y replacement".
3. Clean the optical parts with a soft cloth. Clean extremely dirty areas using a cloth moistened with alcohol.

### Caution:

The surface of the optical components consists of multiple dielectric layers with varying degrees of refraction.

Never use organic solvents (thinner, etc.) or any kind of cleanser on these components.

Since the LCD panel is equipped with an electronic circuit, never use any liquids (water, etc.) to clean the unit. Use of liquid may cause the unit to malfunction.

## Cleaning the Projection Lens

---

Unplug the AC power cord before cleaning.

Gently wipe the projection lens with a cleaning cloth that contains a small amount of non-abrasive camera lens cleaner, or use a lens cleaning paper or a commercially available air blower to clean the lens. Avoid using an excessive amount of cleaner. Abrasive cleaners, solvents, or other harsh chemicals might scratch the surface of the lens.

## Cleaning the Projector Cabinet

---

Unplug the AC power cord before cleaning.

Gently wipe the projector body with a dry soft cloth. When the cabinet is heavily soiled, apply a small amount of mild detergent and finish with a dry soft cloth. Avoid using an excessive amount of cleaner. Abrasive cleaners, solvents, or other harsh chemicals might scratch the surface of the cabinet.

## AIR FILTER CARE AND CLEANING

Air Filter prevents dust from accumulating on surface of Projection Lens and Projection Mirror. Should Air Filter become clogged with dust particles, it will reduce Cooling Fans' effectiveness and may result in internal heat build up and adversely affect life of a projector.

Clean Air Filter following steps below:

- 1** Turn power off, and disconnect AC power cord from AC outlet.
- 2** Pull out air filter unit from the projector.
- 3** Pulling up center frame of air filter top, separate air filter top and sheet from air filter base.
- 4** Clean each parts with brush, vacuum cleaner or wash out dust and particles.  
**Be sure to dry them out.**
- 5** Assemble sheet, air filter top and air filter base, and replace air filter unit to a projector.

Caution; Assembles sheet and filter base

### CAUTION

- Do not operate a projector with air filter removed. Or dust may accumulate on LCD panel and Mirror degrading picture quality.
- Do not put small parts into air Intake Vents. Or It may result in malfunction of a projector.
- The filter be careful and handle. The effect of the filter runs out in case of a leak and it being broken off.

## ■ Mechanical Disassemblies

Disassemble should be made following procedures in numerical order.

Following steps show the basic procedures, therefore unnecessary step may be ignored.

### Caution:

The parts and screws should be placed exactly the same position as the original, otherwise it may cause loss of performance and product safety.

The wiring method of the leads and ferrite cores should be returned exactly the same state as the original, otherwise it may cause loss of performance and product safety.

## ● Temperature Abnormality

### NOTE : Temperature monitor operation

The temperature monitor system is provided to prevent damage of optical components (the LCD panel and polarization film etc.) inside a projector from overheat. Two protection systems are provided. Each system operation as follows :

----- The temperature monitor -1 : -----

#### ■ To control the air-flow of the cooling fans.

The CPU checks the temperature and atmospheric pressure inside a projector. It checks a temperature using temperature sensor-IC5801 and it checks an atmospheric pressure using pressure sensor-IC886. The CPU judges data from sensors and controls the air flow of the cooling fans so the temperature inside the projector is maintained to normal temperature.

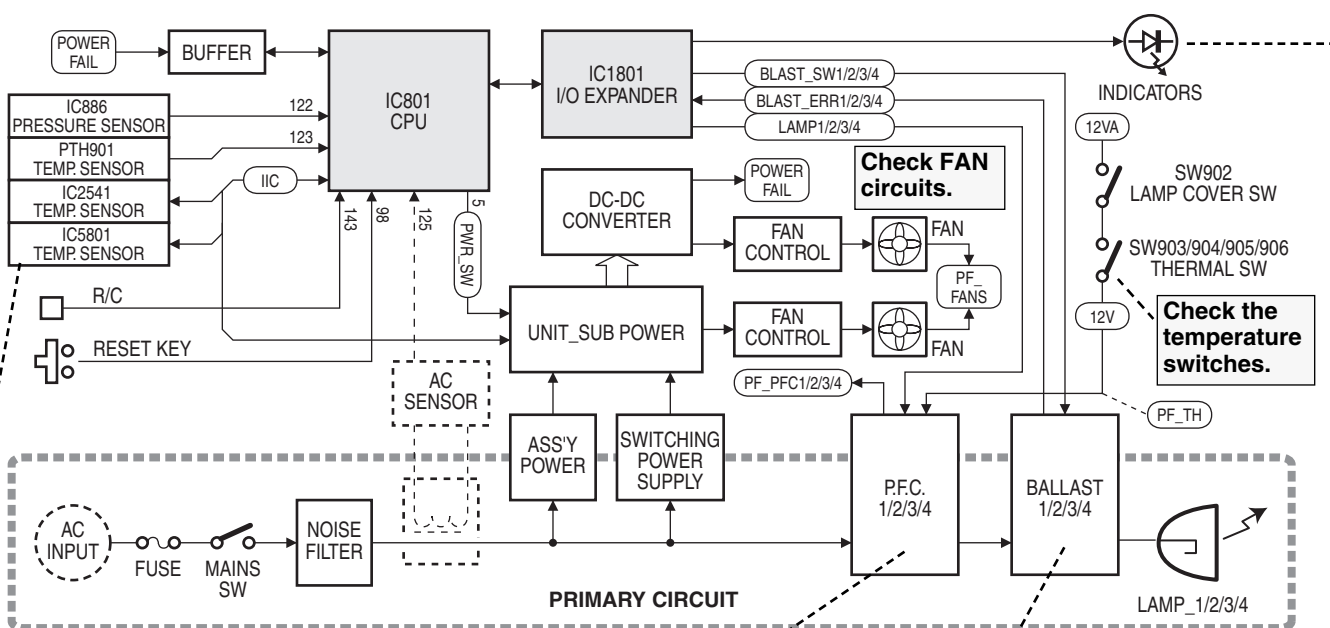

#### ■ To shut down the projector urgent.

The CPU checks temperature of LCD panel periphery(PTH901) and inhalation air(IC5801). If each part temperature reaches to abnormal temperature, the CPU will turn off the projector, and will blink WARNING TEMP. indicator at intervals of 0.5 seconds. Cooling fans operate until temperature returns to normal. Indicator will stop blink, if temperature returns to normal.

----- The temperature monitor -2 : -----

#### ■ Temperature check of lamps :

Temperature switches are arranged near the lamps. Temperature switches will operate, if temperature reaches 110 degrees. When temperature switches become open, they cut off 12V\_PFC line, the power failure "PF\_TH" signal become Low, and then the CPU will shut down the projector, and both of READY and WARNING TEMP. indicators will start flashing.

### NOTE : SENSORS OPERATION

■ The sensor's operation is as follows:

- IC886 : For FAN control
- PTH901 : Abnormal temperature detection
- IC2541 : Inside air temperature monitor
- IC5801 : Abnormal temperature detection and for FAN control

Temperature sensors location can be seen on "protections"( page-7).

#### The temperature switch is operated?

If the temperature around FET reaches 85 degrees, a PFC circuit will be shut down.

#### The temperature switch is operated?

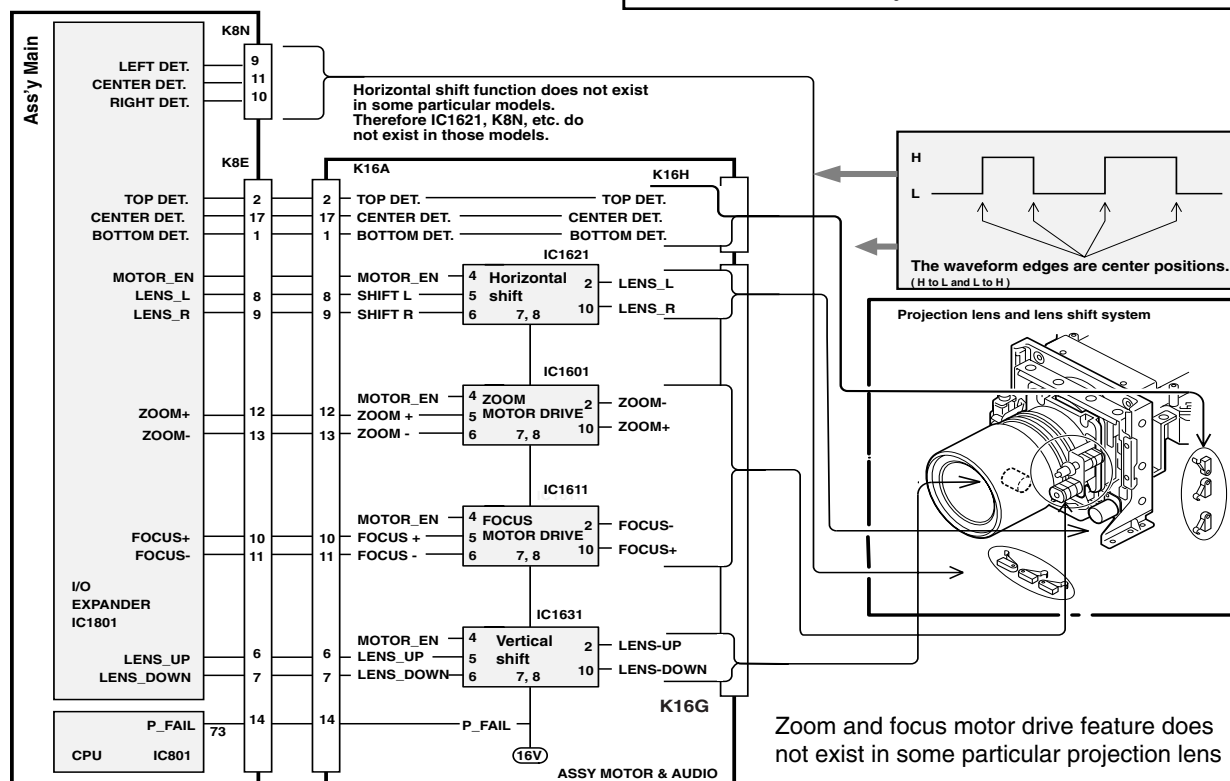

When the temperature around a lamp driver reaches 85 degrees, the lamp ballast will be shut down and a lamp error signal changes from L to H.

#### WARNING TEMP. indicator (red) blink?

The projector is turned off when the temperature around the LCD panel reaches abnormal temperature. And a WARNING TEMP. indicator blinks.

# ● Lamp Abnormality

## NOTE :

- At first, the high-voltage pulse (about 8KVp-p) is generated between the lamp electrodes to generate glow discharge. Then dielectric breakdown occurs, finally glow discharge comes to arc discharge.
- After projector turned on, 30 seconds are required until the light output stabilizes.
- After the projector is turned off, the cooling fans operate for 90 seconds to cool down the lamp and reduce gas pressure inside the lamp.

■ When the temperature around a lamp driver reaches 85 degrees, unit lamp ballast will be shut down and a lamp monitor signal changes from L to H .

■ When the output voltage reaches abnormal voltage (exceeds AC 130V), unit lamp ballast will be shut down and a lamp monitor signal changes from L to H.

## NOTE :

### ■ Lamp Cover Switch

Make sure that the lamp cover is mounted correctly. If not or the lamp cover removed, the lamp does not light for safety.

Check the boss of the lamp cover and the lamp cover switch (SW902).

SW902 -- open : Abnormality

### ■ Temperature Switches

When the internal temperature near the lamps reaches near 110°C, the temperature switches open and 12V\_PFC is not supplied to PFC-Unit.

SW903 - SW906 -- open : Abnormality

### ■ READY (green) LED indicates lamp monitor operation

LED off: Lamp is being cooled.

LED on: Lamp is being lit or already cooled down.

## CPU : --- Lamp monitor operation ---

- The CPU performs an input check by the lamp monitor pin.
- When the "H" signal continues 1 second or more continuously, the CPU judges the state to be abnormal.
- When it has detected abnormal condition, the CPU turns off a projector compulsorily. And the CPU sets up the cooling time for 90 seconds.
- The projector cannot be turned on during a cooling time.

## Electrical Parts List

Product safety should be considered when a component replacement is made in any area of a projector. Components indicated by a  $\Delta$  mark in this parts list and the circuit diagram show components whose value have special significance to product safety. It is particularly recommended that only parts specified on the following parts list be used for components replacement pointed out by the mark.
